

BUILDING REPORTS, DASHBOARDS, AND CUSTOM PAGES (UI BUILDER) FOR THE APPLICATION – INSURANCE CLAIM REQUEST & PROCESSING MANAGEMENT - REPORTING & DASHBOARD USE CASE

Raghavi S - 241401074

1. AIM:

To build a report view on top of the Claim_Request_Form — a tabular report (Claim_Request_Form Report) listing every claim request — and to design a custom dashboard page (Claims_Dashboard) using Zoho Creator's UI Builder (Page Builder) that gives claim officers an at-a-glance view of total claims, total and average claim amount, the spread of claims by claim type and by claimant type, together with the live claim records.

This addresses the insurer's need to move from a flat list of claim submissions to visual, role-friendly views that make it easy to see claim volume, financial exposure and claimant mix without opening every record individually.

2. PROCEDURE:

Step 1: Design the form — The Claim_Request_Form was created in Zoho Creator in the application "Insurance Claim Request & Processing Management" with the sections Claimant Details (Claimant_Name, Claimant_Type, Policy_Number), Contact Details (Email_Address, Contact_Number, Residential_Address), Claim Details (Claim_Type, Date_Of_Incident, Claim_Amount_Requested, Supporting_Documents_Available, Incident_Description) and Scheduling & Declaration (Preferred_Callback_Time, Declaration_Of_Authenticity).

Step 2: Set field types and validations — Claimant_Type was configured as a radio field (Policyholder, Nominee, Third Party), Claim_Type as a drop-down (Health Insurance, Life Insurance, Motor Insurance), Contact_Number with the +91 country code, Date_Of_Incident as a date field in dd-MMM-yyyy format, and Declaration_Of_Authenticity as a mandatory checkbox. Claimant_Name, Policy_Number, Contact_Number, Claim_Type, Date_Of_Incident and Claim_Amount_Requested were marked mandatory.

Step 3: Enter sample data — Four claim records were submitted through the form: three by policyholders and one by a nominee, covering Health, Life and Motor insurance claims.

Step 4: Create the list report — A report named Claim_Request_Form Report was created on the form as a List report, with the columns Claimant_Name, Claimant_Type, Policy_Number, Email_Address, Contact_Number and Residential_Address.

Step 5: Open the Page Builder — A new custom page named Claims_Dashboard was created for the application using Zoho Creator's Page Builder (UI Builder), which provides elements such as Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, Button and Widgets.

Step 6: Add the summary tiles — Three summary elements were placed at the top of the page: Total Claims (record count of the form), Total Claim Amount (sum of Claim_Amount_Requested) and Average Claim Amount (average of Claim_Amount_Requested).

Step 7: Add the charts — Two Pie charts were added below the tiles, sourced from the Claim_Request_Form: "Claims by Claim Type" grouped on Claim_Type, and "Claims by Claimant Type" grouped on Claimant_Type.

Step 8: Embed the report — The Claim_Request_Form Report element was added beneath the charts so that the dashboard also lists the individual claim records in one place.

Step 9: Publish and verify — The application was run in access mode and the form, the report and the dashboard were checked with the sample data.

3. OUTPUT:

3.1 Claim_Request_Form — Claimant and Contact Details

The screenshot shows the 'Claimant Details' and 'Contact Details' sections of the 'Claim_Request_Form'. The 'Claimant Details' section includes fields for 'Claimant_Name' (split into 'First Name' and 'Last Name'), 'Claimant_Type' (with radio button options for 'Policyholder', 'Nominee', and 'Third Party'), and 'Policy_Number'. The 'Contact Details' section includes fields for 'Email_Address', 'Contact_Number' (with a dropdown for country code and a text input for the number), and 'Residential_Address' (split into 'Address Line 1' and 'Address Line 2'). Mandatory fields are marked with a red asterisk. The form is part of an application titled 'Insurance Claim Request & Processing Management'.

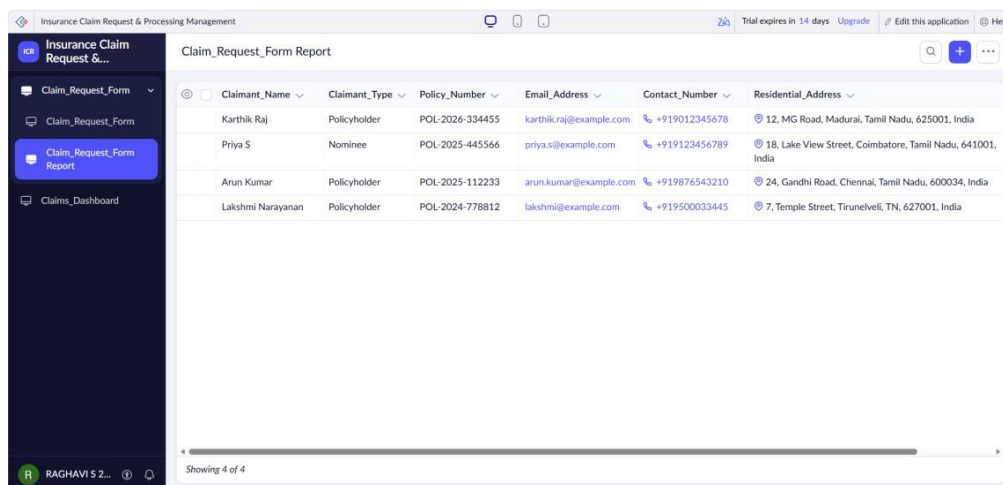

The form opens with the Claimant Details section (Claimant_Name, Claimant_Type with Policyholder / Nominee / Third Party options, and Policy_Number) followed by Contact Details (Email_Address, Contact_Number with +91 country code, and Residential_Address). Mandatory fields are marked with a red asterisk.

3.2 Claim_Request_Form — Claim Details and Declaration

The screenshot shows the 'Claim Details' and 'Scheduling & Declaration' sections of the 'Claim_Request_Form'. The 'Claim Details' section includes fields for 'Claim_Type' (a dropdown menu), 'Date_Of_Incident' (a date input field), 'Claim_Amount_Requested' (a text input field), 'Supporting_Documents_Available' (a dropdown menu), and 'Incident_Description' (a text area). The 'Scheduling & Declaration' section includes a 'Preferred_Callback_Time' (a time input field) and a 'Declaration_Of_Authenticity' checkbox with the text 'I declare that the information provided is true and accurate'. Mandatory fields are marked with a red asterisk. The form is part of an application titled 'Insurance Claim Request & Processing Management'.

The lower part of the form captures Claim_Type, Date_Of_Incident, Claim_Amount_Requested, Supporting_Documents_Available and Incident_Description, followed by the Scheduling & Declaration section with Preferred_Callback_Time and the Declaration_Of_Authenticity checkbox. Claim_Type and Claimant_Type drive the grouping used in the dashboard charts.

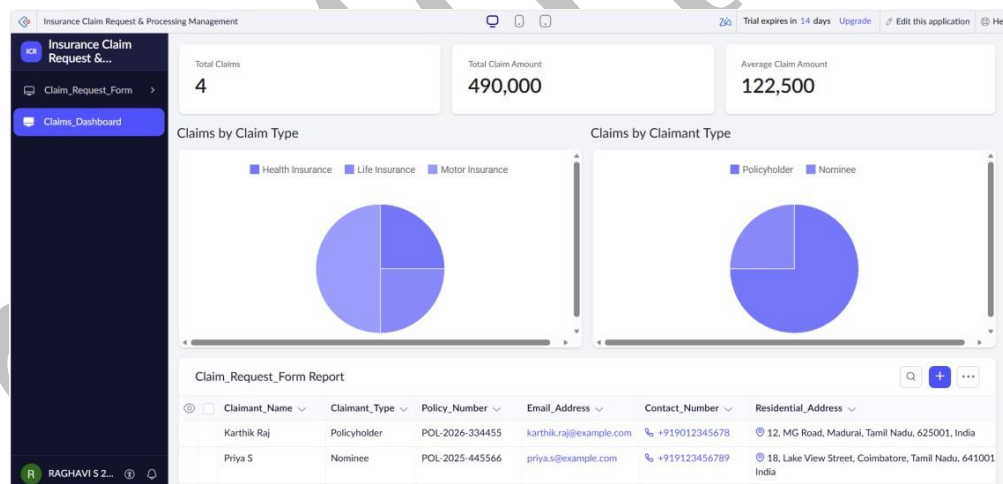

3.3 Claim_Request_Form Report (List Report)

Claimant_Name	Claimant_Type	Policy_Number	Email_Address	Contact_Number	Residential_Address
Karthik Raj	Policyholder	POL-2026-334455	karthik.raj@example.com	+919012345678	12, MG Road, Madurai, Tamil Nadu, 625001, India
Priya S	Nominee	POL-2025-445566	priya.s@example.com	+919123456789	18, Lake View Street, Coimbatore, Tamil Nadu, 641001, India
Arun Kumar	Policyholder	POL-2025-112233	arun.kumar@example.com	+919876543210	24, Gandhi Road, Chennai, Tamil Nadu, 600034, India
Lakshmi Narayanan	Policyholder	POL-2024-778812	lakshmi@example.com	+919500033445	7, Temple Street, Tirunelveli, TN, 627001, India

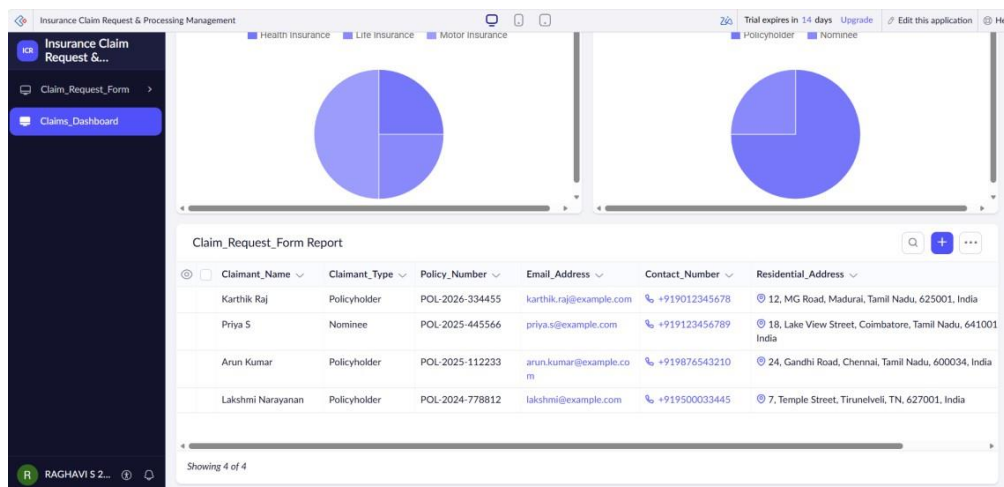

The list report displays all four submitted claim requests in a table with *Claimant_Name*, *Claimant_Type*, *Policy_Number*, *Email_Address*, *Contact_Number* and *Residential_Address* (Karthik Raj, Priya S, Arun Kumar and Lakshmi Narayanan), giving the claims team a complete record of every request. The footer confirms "Showing 4 of 4".

3.4 Claims_Dashboard (Page Builder output)

The custom page shows three summary tiles — Total Claims: 4, Total Claim Amount: 490,000 and Average Claim Amount: 122,500 — followed by two pie charts, "Claims by Claim Type" (Health Insurance, Life Insurance, Motor Insurance) and "Claims by Claimant Type" (Policyholder, Nominee), with the embedded *Claim_Request_Form Report* beginning below them. The navigation menu lists the form and the dashboard.

3.5 Claims_Dashboard — full view

Scrolling down shows the complete dashboard: the two pie charts and the embedded report listing all four records. In the Claimant Type chart, Policyholders account for three of the four claims (75%) and the Nominee for one (25%), giving staff a single-screen summary of claim activity.

4. FINAL RESULT:

A List report (Claim_Request_Form Report) was successfully built on the Claim_Request_Form, showing every claim request in one table with claimant, policy and contact details.

A custom dashboard page, Claims_Dashboard, was designed using Zoho Creator's UI Builder, combining summary tiles (Total Claims, Total Claim Amount, Average Claim Amount), two pie charts (by claim type and by claimant type) and an embedded report into a single at-a-glance view.

All views were verified in live mode with four sample records, confirming that the tiles, charts and embedded report render correctly and pull live records from the form.

The exercise met its objective: the claims team now has complementary low-code views — listed and summarised — built entirely without custom code.
