

# DATA MODELLING AND FORM DESIGN FOR INSURANCE CLAIM REQUEST IN ZOHO CREATOR

Raghavi S  
241401074

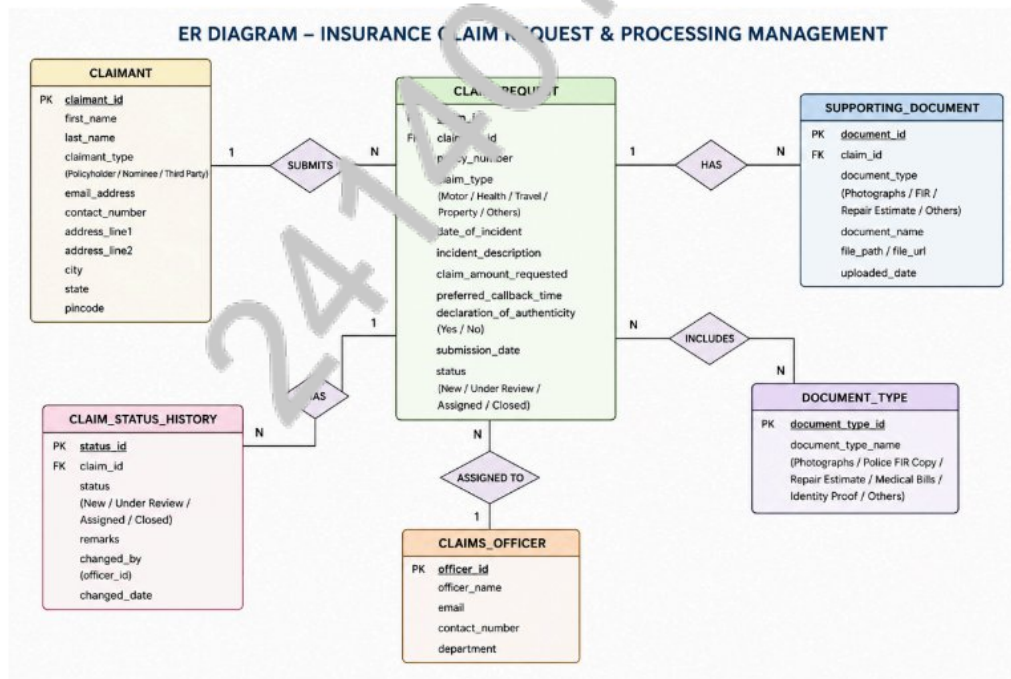

## AIM

To design and build an Insurance Claim Request Form application in Zoho Creator using the Basic Fields available in the Form Builder, and to collect and organize participant claim requests for an event in a clear and structured way.

## PROCEDURE

### 1. Data Model Design

Before building the form, the required fields were studied and grouped into logical sections that follow the claim process: Claimant Details, Claim Request, Supporting Documents, Document Type, Claim Status History, and Claims Officer. The ER diagram below shows these entities and how they are related.

### 2. Application and Form Creation

1. Logged into Zoho Creator and clicked Create New Application → Create from Scratch.

2. Named the application “Insurance Claim Request Form” and confirmed creation, which opened the blank workspace.
3. Inside the application, opened the Forms panel and added a new form named Claim\_request\_form.
4. This automatically created a linked report, All\_Requests, which lists every claim that is submitted.

### 3. Adding the Basic Fields

In the Form Builder, each required field was dragged from the Basic Fields palette onto the form, then renamed and configured using the Field Properties panel. The fields used are listed below.

| Basic Field  | Form Field Name                | Purpose                                                                    | Sample Value                          |
|--------------|--------------------------------|----------------------------------------------------------------------------|---------------------------------------|
| Name         | Participant Name               | Full name of the participant, split into First and Last Name.              | Sarvesh R                             |
| Radio        | Participant Type               | A single required choice showing the type of claimant.                     | Choice 1                              |
| Number       | Team Size                      | Number of people covered under the claim.                                  | 3                                     |
| Email        | Email Address                  | Email used to send claim updates and confirmations.                        | sarvesh@gmail.com                     |
| Phone        | Contact Number                 | Mobile number with the Indian country code (+91).                          | +91 84965 74551                       |
| Single Line  | College Name                   | Short text entry for the participant's college.                            | NIT                                   |
| Address      | Institution Address            | Full address, with Address Line 1/2, City, State, Postal Code and Country. | Trichy, Tamil Nadu, 600987            |
| Drop Down    | Event Track                    | A single-select list of event tracks.                                      | Web Development Track                 |
| Multi Select | Areas of Interest              | One or more topics of interest for the claim.                              | Blockchain, UI/UX Design              |
| Multi Line   | Expectations from Event        | Free-text notes on what the participant expects.                           | Looking forward to hands-on sessions. |
| Date         | Preferred Session Date         | Date the participant prefers for the session.                              | 21-Aug-2026                           |
| Time         | Preferred Session Slot         | Preferred time slot for the session.                                       | 11:11:11                              |
| Checkbox     | Agree to Event Code of Conduct | Confirms the participant accepts the event rules.                          | Checked (Agreed)                      |

### 4. Grouping Fields into Sections

To keep the form simple and easy to follow, a Section field was added above each group of related fields, and the fields were then dragged under the correct section. Four sections were created:

- Section A — Participant Details: Participant Name, Participant Type, Team Size.
- Section B — Contact & Institution Details: Email Address, Contact Number, College Name, Institution Address.
- Section C — Event Preferences: Event Track, Areas of Interest, Expectations from Event.
- Section D — Scheduling & Policy Acknowledgement: Preferred Session Date, Preferred Session Slot, Agree to Event Code of Conduct.

Each section header was renamed to match its purpose, and the fields inside were reordered so the form flows naturally from the participant's details to the final acknowledgement.

## 5. Setting Up Validations

5. Made Participant Name, Email Address, Contact Number, Team Size, Event Track, Preferred Session Date, and the code-of-conduct checkbox mandatory fields.
6. Confirmed the built-in email format check works on Email Address.
7. Set the Contact Number field to use the Indian country code (+91).
8. Set Team Size to accept values between 1 and 10 only.
9. Restricted Preferred Session Date to today or a future date, so past dates cannot be picked.
10. Confirmed the Claim button stays disabled until the code-of-conduct checkbox is ticked.

## 6. Preview and Testing

11. Clicked Preview to check that the live form shows all four sections in the correct order with the right field types.
12. Submitted a few sample claims (Sarvesh R and Singan P) to test the validations and generate sample report data.
13. Opened the All\_Requests report and confirmed every submitted value appears against the correct field.
14. Applied a filter on Participant Type and College Name to check that claims can be sorted easily.

## OUTPUT

The screenshots below show the finished application: the claimant-facing Claim\_request\_form with its four sections, and the All\_Requests report listing the sample submissions.

The screenshot displays the 'Insurance Claim Request Form' application. The sidebar on the left contains a 'Requests' section with a 'Claim request form' button and an 'All Requests' button. The main form area is titled 'Claim request form' and contains the following fields:

- Participant name: First Name, Last Name
- Participant Type: Radio buttons for Choice 1, Choice 2, Choice 3
- Team Size: Text input with a placeholder '###'
- Email Address: Text input
- Contact number: Country code dropdown (+91) and text input (81234 56789)
- College name: Text input
- Institution Address: Text input, Address Line 1, Address Line 2
- City / District: Text input
- State / Province: Text input
- Postal Code: Text input
- Country: Dropdown menu
- Event track: Dropdown menu

The top of the application shows the title 'Insurance Claim Request Form' and a status bar indicating 'Trial has expired' with links for 'Upgrade', 'Edit this application', and 'Help'.

## RESULT

The Insurance Claim Request Form was successfully built in Zoho Creator using the Basic Fields — Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox. The fields were grouped into clear sections, the required validations were set up correctly, and the All\_Requests report was confirmed to capture every submitted claim accurately. This experiment shows how data modelling and simple form design in a low-code tool can support a real-world claims process.
